1943 SPRING LIST

◆ Hardy Wild Flowers ◆

Many wild flowers are the first harbingers of spring. From earliest spring to killing frost there may be wild flowers blooming in the garden. They are easily established and will colonize in suitable locations. Several varieties are suitable for border and rock garden. Many delight in a woody location, are attractive among shrubbery, and are ideal for naturalizing. They live year after year and require less care than any other flowers.

Varieties marked (*) do best planted in full shade. Those marked (§) do best in full sun. All others thrive in light to moderate shade.
